

Hi everyone and thank you for purchase this template!

How to apply preset?

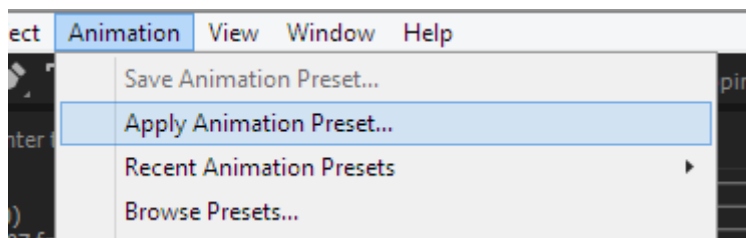

Very easy!

Write text or select text layer in After Effects

Select Animation -> Apply Animation Preset...

And choose the preset **"Typewriter Pro.ffx"**.

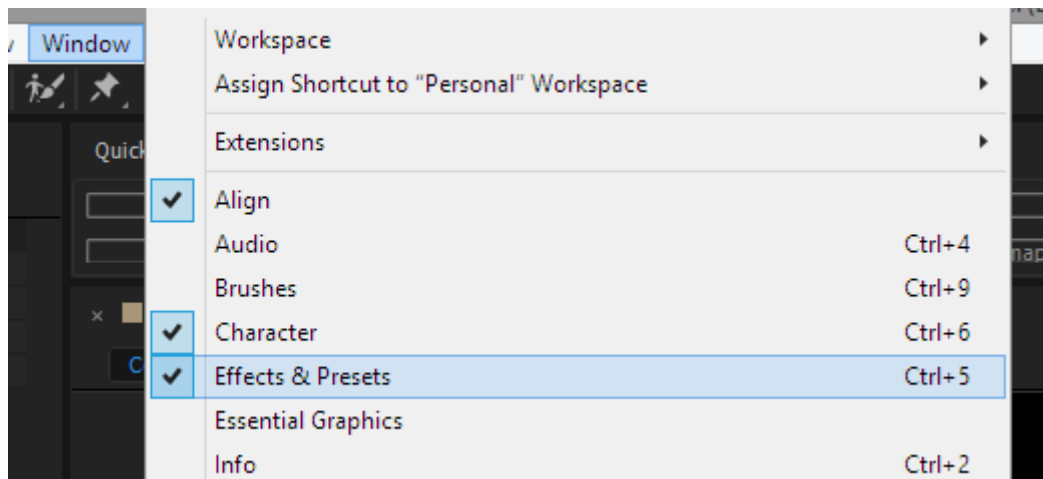

Or you can add the preset into folder Presets (inside AE):

- Windows
C:\Program Files\Adobe\Adobe After Effects CS[x]\Support Files\Presets
- Mac
/Applications/After Effects CS[x]/Presets

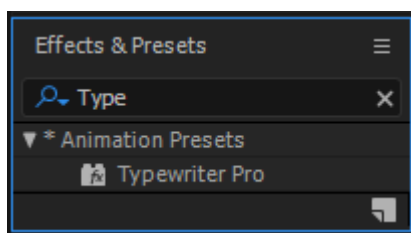

Where [x] – your version AE.

Now you can use preset via panel Effects & Presets.

Select Window -> Effects & Preset

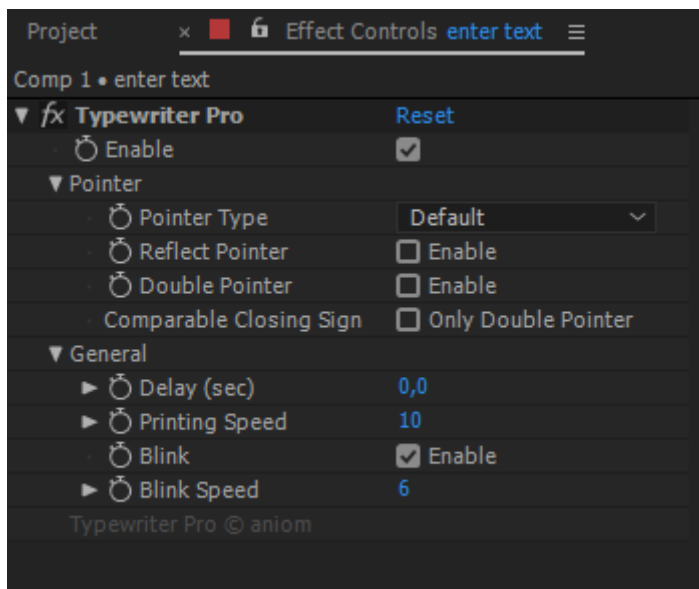

In panel find the preset, and double-click on preset or drag and drop on your text layer.

Great! Preset applied.

Let's adjust it.

Select tab Effects

- Enable – On/Off preset
- *Pointer Group*
 - 1) **Pointer Type** – choose the symbol for pointer
 - 2) **Reflect Pointer** - reflect pointer to left side
 - 3) **Double Pointer** – left and right pointer together
 - 4) **Comparable Closing Sign** - similar the pointer (sample: if < then >)
- *General Group*

- 1) **Delay (sec)** – delay before start in seconds
- 2) **Printing Speed** – it's printing speed 😊
- 3) **Blink** – On/Off blink
- 4) **Blink Speed** – it's blink speed if enabled

The end! Thank you for reading!

Good luck!
